LENZING™ Lyocell Matte

Feels so right

# matte indigo

Historically, luster was a coveted fabric property due to its association with silk. Fabrics made from TENCEL™ Lyocell fibers possess a natural sheen similar to silk, a quality further enhanced in the lightweight, indigo warp-dyed fabrics TENCEL™ Lyocell is known for. For that part of the market looking for something with a lower shine, Lenzing now has a solution – matte TENCEL™ Lyocell fibers. This fiber variant proves that you do not need to shine to stand out, while still providing the same level of aesthetic and wearing performance associated with the original TENCEL™ Lyocell.

matte

Matte TENCEL™ Lyocell fibers are made by incorporating minerals in the closed loop lyocell production process, giving them their unique finish while maintaining high resource efficiency and low environmental impact. Like standard TENCEL™ Lyocell fibers, matte TENCEL™ Lyocell fibers are designed to be fully biodegradable in soil, freshwater and marine conditions.\* They are certified according to STANDARD 100 by OEKO-TEX®, class 1.

\*Tests are currently under progress. Detailed results are awaited.

## “feels right” features

botanic origin

sustainable production

biodegradable

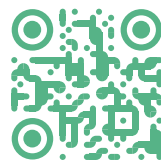

certified safe

smoothness

supply chain transparency
