

feels right,
feels natural

 **Tencel™**
Feels so right

the wood-based bag concept

Make your sustainable bag solution a reality. Every part of a bag can be made out of TENCEL™ Lyocell fibers – whether it's the textile outer fabric, inner lining or the straps. Even zipper tapes or sewing threads can be made out of these responsibly produced fibers. With tote bags, purses, handbags, and backpacks made from fibers derived from wood, a natural raw material, you can complete your sustainable wardrobe and carry nature with you.

applicable technology:

The pioneering REFIBRA™ technology involves upcycling cotton scraps e.g. from garment production, in addition to wood pulp, where the raw material is transformed to produce new virgin TENCEL™ Lyocell fibers to make fabrics and garments.
